PC's, Routers, Hub and Switches

Router

A **router** is a networking device that forwards data packets between computer networks. **Routers** perform the traffic directing functions on the Internet. Data sent through the internet, such as a web page or email, is in the form of data packets.

Hubs

Hubs are networking devices operating at a physical layer of the OSI model that are used to connect multiple devices in a network

Switch

A network *switch* is networking hardware that connects devices on a computer network by using packet *switching* to receive and forward data to the destination
